

High Duster LT

Lightweight reach tool designed for ergonomic, effective high-surface cleaning

The High Duster LT is the next evolution in ergonomic cleaning tools, purpose-built to help EVS teams safely and efficiently tackle high and hard-to-reach surfaces. As the newest member of Contec’s trusted High Duster family, the High Duster LT combines ultra-lightweight construction with high-performance cleaning versatility - reducing staff fatigue while boosting productivity.

Its bendable, flexible head conforms easily to irregular or recessed surfaces like vents, lighting fixtures, and piping. Paired with Contec’s disposable microfiber sleeves, the High Duster LT ensures superior dust and debris capture with each use. The single-use sleeves reduce cross-contamination and eliminate the time and cost of laundering. Designed with EVS teams in mind, the High Duster LT also features a telescoping pole that extends reach without the need for ladders or lifts - promoting safer cleaning and better compliance with infection control standards.

Whether you’re servicing operating rooms, patient hallways, or facility infrastructure, the High Duster LT keeps overhead cleaning off your team’s shoulders - literally.

Overhead Cleaning Without the Overhead Strain

A safer, lighter way to clean overhead surfaces - without strain, ladders, or relaundered sleeves.

Features

- Ultra-light design reduces fatigue during extended overhead use
- Disposable microfiber or tow-fiber sleeves help reduce cross-contamination
- Telescoping handle improves safety and reach - no ladders required
