

Premira® ScrubTex™

Disposable Microfiber Scrub Wipe for Superior Cleaning.

The Premira® ScrubTex™ Wipe is the ultimate single-use microfiber solution, delivering superior scrubbing power and contamination control in high-risk healthcare environments. Engineered with our proprietary Scrubberage® technology, ScrubTex features alternating lanes of abrasive scrubbing material and ultra-fine microfiber, allowing for effective agitation of stubborn residues while trapping and locking in dirt, debris, and bioburden. Ideal for operating rooms, procedural suites, and acute care settings, ScrubTex is designed to organic debris while reducing the risk of cross-contamination.

Unlike reusable wipes that require laundering and risk chemical incompatibilities, ScrubTex is always fresh, effective, and optimized for infection control. With broad chemical compatibility and a disposable design, EVS professionals can clean with confidence while ensuring compliance with best practices in surface disinfection.

Optimized for Infection Control
Premira® ScrubTex™ combines the superior cleaning power of microfiber with targeted scrubbing action, providing an advanced, single-use solution for critical healthcare environments.

Features	
Scrubberage® Technology – Alternating scrub and microfiber lanes for maximum cleaning performance.	
Single-Use for Infection Control – Reduces the risk of cross-contamination compared to reusable wipes.	
Superior Chemical Compatibility – Works with a broad range of disinfectants without compromising performance.
